Enterprise Migrations with AWS Control Tower

Accelerate your cloud journey with GlobalLogic, an Advanced AWS Partner with the AWS Service Delivery designation for AWS Control Tower.

Accelerate Your Cloud Journey, Reduce Risk & Gain Efficiency with a Proven AWS Control Tower Service Delivery Partner

GlobalLogic has earned the **AWS Service Delivery designation for AWS Control Tower** in recognition of our success in designing and building enterprise-grade solutions for customers.

Drawing on our significant experience building Control Tower for enterprise customers, we leverage proven templates and automation to provide you with a safe, secure environment tailored to your needs in an efficient manner.

We help customers maximize Control Tower's potential by building to the AWS Built on Control Tower (BoCT) technical specifications within two defined frameworks:

- Customizations for AWS Control Tower (CfCT)

- AWS Control Tower Account Factory for Terraform (AFT)

aws

GlobalLogic is an AWS Advanced Consulting Partner

50+
AWS customer launches

30,000+
skilled employees in 18 countries

20+
years of digital product design and engineering experience

We Lay a Foundation of Best Practices, Then Customize to Your Unique Needs

Assess	Design	Implement	Optional Services
Discovery & Planning	Decisions Register	Landing Zone	Migration
Well-Architected Review	Tagging Strategy	Automation	FinOps
	High-Level Design	Additional Modules	Observability
	Cost Awareness	Knowledge Transfer	

Understand your desired outcomes > Apply proven best practices > Build the foundations > Tailor to your needs

Leverage GlobalLogic's deep digital product engineering expertise and AWS experience to transform and modernize your business and its offerings.

Customizable Enterprise AWS Control Tower Services

Set up, govern, and secure a multi-account AWS environment with centralized logging integration, monitoring, and billing systems in line with AWS Well-Architected Framework best practices. We make it possible with **AWS Control Tower as a Service**.

Discovery >> **Design** >> **Build** >> **Migrate**

The design and provisioning of cloud-native platforms for your enterprise business requirements come with a great many challenges that are key to your success, including:

**Security | Compliance | Self-service access
Operations | Cost Management
Change management**

GlobalLogic's AWS Control Tower Discovery & Design service deeply analyzes your requirements through interviews and workshops with key stakeholders, then leverages our previous experience and repeatable best practice designs.

You receive Design Documentation tailored to your organization's unique needs to support your AWS Control Tower build.

GlobalLogic deploys a multi-disciplinary pod to support and execute the configuration of your Control Tower service. Our team works seamlessly with yours to ensure a successful handover to operational service.

Key deliverables from our Build phase lay the groundwork for best practices and regulatory requirements, ensuring your organization has a uniform, replicable, and automated procedure to expedite delivery and deployment.

We develop bespoke solutions to address your organization's unique needs, then migrate current AWS accounts into the new Control Tower environment. Finally, we facilitate knowledge transfer sessions with operational teams for ongoing success.

How can we help YOU?
